

East Island

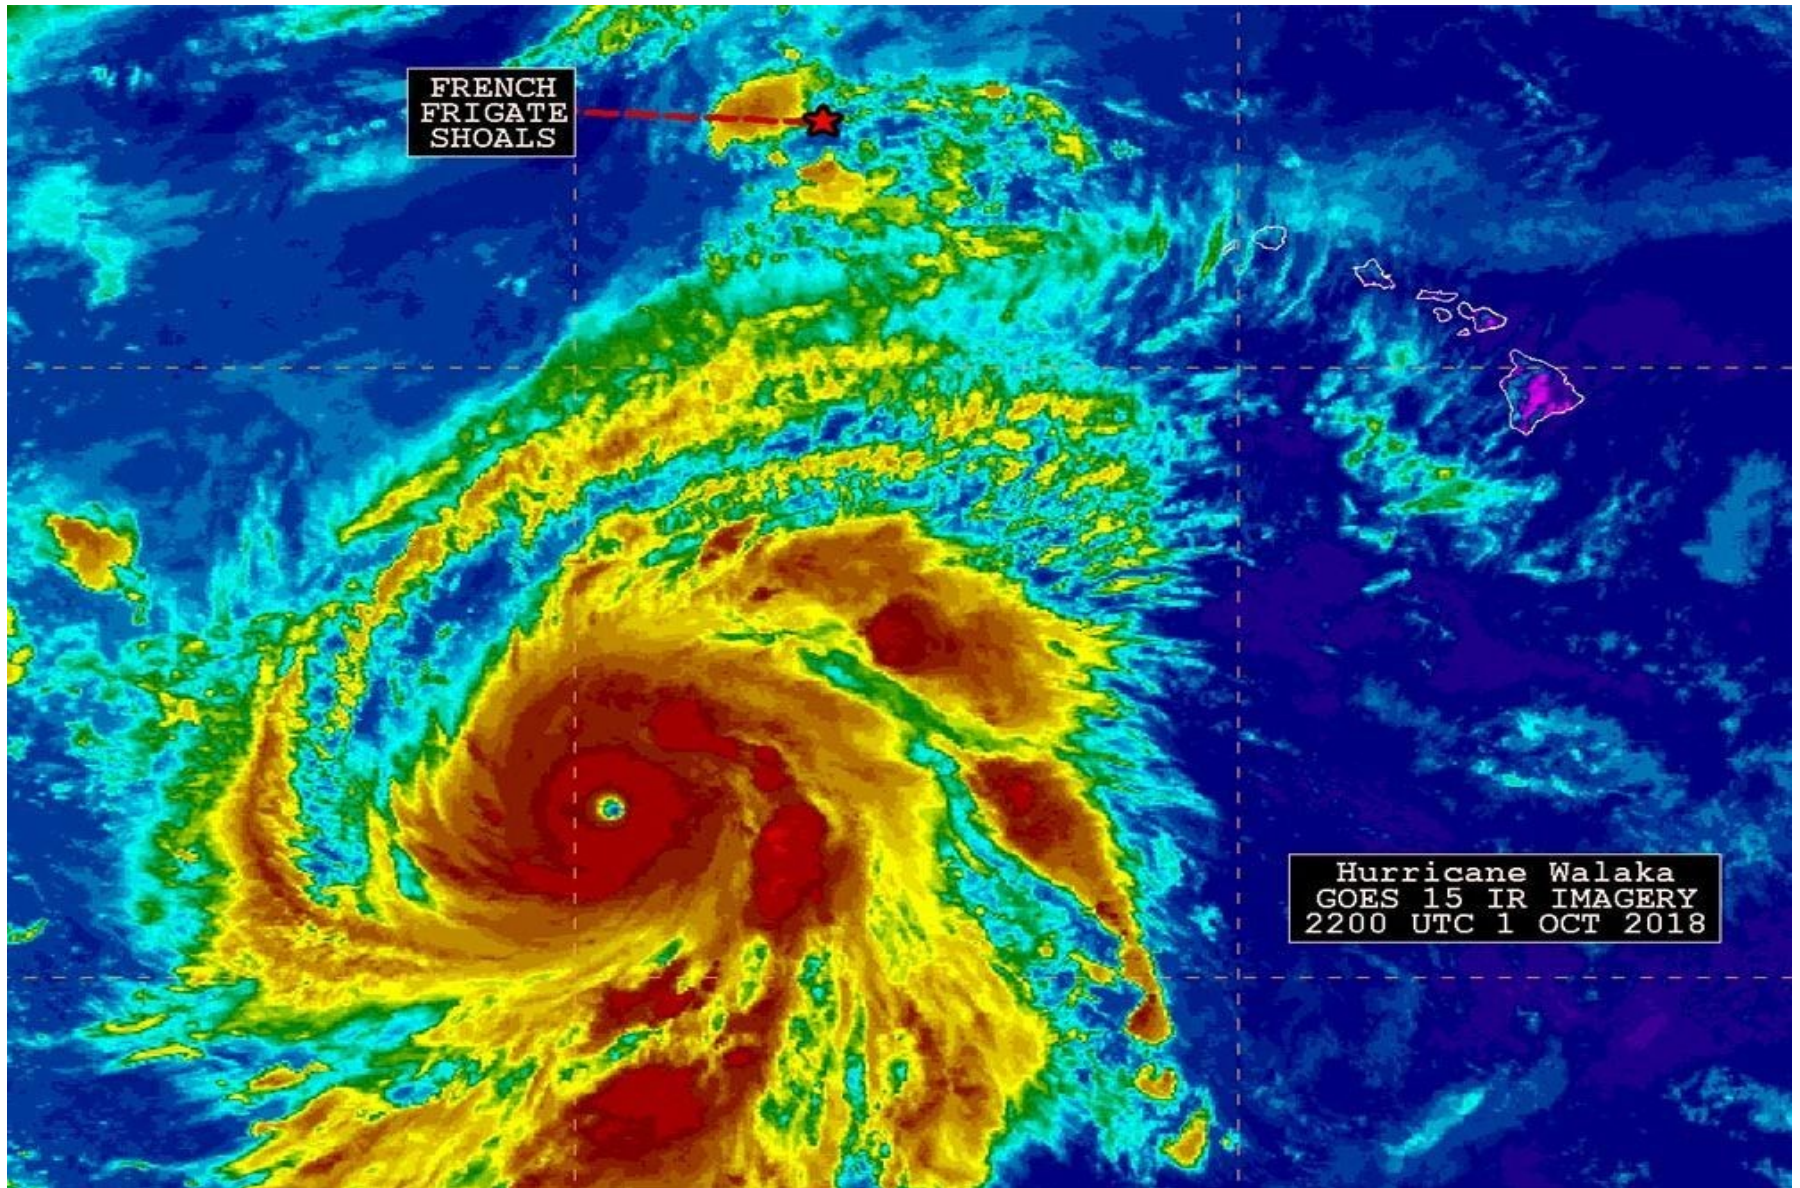

Island vanishes* beneath* the sea.
East Island, in the US state of Hawaii, has
disappeared after a hurricane* hit the region.

The gravel and sand island which was around 800 metres long, was one of many islands in the Pacific Ocean to have been hit by storms* this year.

Hurricane Walaka, At the start of October, moved sand and caused water to rise.

Scientists are worried that rare species of seal* and turtle have have been affected. No humans were harmed.

Why East Island disappeared ?

The Island was engulfed by hurricane Walaka who shook* the ocean and who has led to rise in sea level. An ecological disaster linked* to climate change.
